DATABASE TERMINOLOGY

- **Database**

  Database is an organized collection of structured data or the information**. Database** help to store and retrieve data in more efficient manner.

- **Entity**

  Entity is an object in the database that exists.

- **Attribute**

  Attribute refers to a database component, such as a table.

- **Mandatory Attributes**

  Mandatory Attributes are the attributes that are required for the table to function and must be contained in the table.

- **Optional Attributes**

  Optional Attributes are the attributes that are not essential in the table to function but add some meaning to the table. ➢ **Cardinality**

  Cardinality can be defined as the set of elements arranged in tables and rows.

- **Datatypes**

  A data type is an attribute associated with a piece of data that tells a computer system how to interpret its value. Data types mainly classified into three categories for every database.

  - **String Data types**
  - **Numeric Data types**
  - **Date and time Data types**

- **Constraint**

In SQL, a constraint is any rule applied to a column or table that limits what data can be entered into it. Some of Important Constraint are:

- **Primary Key**

  A primary key is a unique identifier for each record in a database table.

- **Foreign Key**

  A foreign key is a column or a set of columns in one table that references the primary key columns in another table.

- **NOT NULL**

  NOT NULL is use to specify that a column in a database table must contain a value.

- **Unique Key**

  A unique key is a constraint that ensures the values within a column or group of columns are unique across all rows in a table

- **Candidate Key**

  A candidate key is a set of one or more columns in a database table that can uniquely identify each record (row) within that table.

- **ERD / Entity Relationship Digram**

  A is a visual representation of the entities, their attributes, and the relationships among them within a database or information system.

- **Column Level Constraint**

The Constraint that is implement in the column is known as column level constraint. It is done while creating the table.

- **Table Level Constraint**

The constraint that is implement in the whole table level is known as Table level Constraint. It can be implement into the table. Atler is use for table level constraint.

Entity Table

Each Room may have one or many booking

Each Room may have one or many room inventory

Each Room may have one or many Reservation
Each Booking have one and only one room
Each Booking have one and only one Customer
Each Customer may have one or many Booking
Each Customer may have one or many payment
Each Customer may have one or many Reservation
Each Customer may have zero, one or many feedback
Each Reservation have one and only one Room
Each Reservation have one and only one payment method
Each Supplier may have one or many Inventory
Each Inventory may have one or many Inventory
Each Staff Member may have one or many room
Each Staff member have one and only one department
Each Department may have one or many staff member
Each feedback have one and only one Customer

102	Shampo	25	250	For human body	2023-11-20	503	Liquid	David Becham	Toronto	3576545925

103	Chair	35	600	For room	2022-01-12	524	Furniture	William Jr	Brampton	5658973654

First Normal Form / 1NF

- 1NF is also known as First Normal Form. It is used to reduce the multivalued and multi-column in the table.

Requirement / Criteria of the 1NF.

- It doesn't contain repeating group and there is no multi-column in the table.
- **Room, Booking, Customer, Reservation, Payment Method, Room Inventory, Feedback, Department and Staff member** are in 1NF. Because, it full fill the 1NF requirement

Inventory was not in 1NF but it also fulfill the criteria to be 1NF

Table Complete the below criteria to be 1NF

- **Inventory_id** and **Supplier_id** are composite key for the table.
- Doesn't contain any multi-valued column or repeating group

Inventory

Inventory_id	**Supplier_id**	Inventory_Name	Inventory_rate	Inventory_Quantity	Inventory_description	Purchased_date	Product_type	Supplier_Name	Supplier_address	Supplier_contact
101	501	Towel	10	100	For toilet use	2023-12-21	Cleaning	Ram Sharma	Mississauga	4379551559
102	503	Shampo	25	250	For human body	2023-11-20	Liquid	David Becham	Toronto	3576545925
103	524	Chair	35	600	For room	2022-01-12	Furniture	William Jr	Brampton	5658973654

Second Normal Form / 2NF

The table is said to be in 2NF if it is in 1NF and there is composite key in the 1NF and partial dependency which can be reduce in the 2NF.

Requirement / Criteria to be 2NF

- The table must be in 1NF
- The 2nd Normal Form is performed when there is composite primary key and partial dependencies.
- **Room, Booking, Customer, Reservation, Payment Method, Room Inventory, Feedback,**

Department and Staff member are in 1NF. Because, it full fill the 2NF requirement

Supplier_id is foreign key in inventory

Table Complete the below Criteria to be 2NF

- Table is already in 1NF
- There is partial dependency between Inventory_id and Supplier_id which has been eliminated in 2NF

Inventory

Inventory_id	Inventory_name	Inventory_rate	Inventory_quantity	Inventory_Description	Purchase_date	**Supplier_id**
101	Towel	10	100	For toilet Use	2023-12-21	501
102	Shampo	25	250	For human body	2023-11-20	503
103	Chair	35	600	For room	2022-01-12	524

Supplier

Supplier_id	Supplier_name	Supplier_address	Supplier_contact	Product_type
501	Cleaning	Ram Sharma	Mississauga	4379551559
503	Liquid	David Becham	Toronto	3576545925
524	Furniture	William Jr	Brampton	5658973654

Third Normal Form / 3NF

The table should be in 2NF to be in 3NF. There should not be transitive dependency for the table to be in 3NF.

Requirement / Criteria to be 3NF

- The table must be in 2nd Normal Form to be converted into 3NF
- The table should not contain non-key dependencies.

Room, Booking, Customer, Reservation, Payment Method, Room Inventory, Feedback, Department and Staff member are in 2NF. Because, it full fill the 3NF requirement

Table Complete the criteria to be 3NF

- The table is in 2NF.
- The table doesn't contain any non-key dependenices.

Inventory

Inventory_id	Inventory_name	Inventory_rate	Inventory_quantity	Inventory_Description	Purchase_date	**Supplier_id**
101	Towel	10	100	For toilet Use	2023-12-21	501

102	Shampo	25	250	For human body	2023-11-20	503
103	Chair	35	600	For room	2022-01-12	524

Supplier

Supplier_id	Supplier_name	Supplier_address	Supplier_contact	Product_type
501	Cleaning	Ram Sharma	Mississauga	4379551559
503	Liquid	David Becham	Toronto	3576545925
524	Furniture	William Jr	Brampton	5658973654
